Protected Health Information Management Tool (PHIMT)

What It Is...

PHIMT stores Protected Health Information (PHI) about disclosures. It also allows users to input information regarding PHI authorizations and restrictions that are made for a particular patient. It assists in complying with the HIPAA Privacy Disclosure Accounting Requirement.

Key Features and Benefits

- PHIMT allows users to:
 - Maintain authorizations
 - Track PHI requests or release of information
 - Track complaints
 - Create an automated workflow process developed by the users
 - Create pre-defined requesters from organizations
 - View the details about the information disclosed
 - Track disclosures, document requests for amendments and authorizations, document complaints and restrictions to PHI
 - Consolidate multiple tasks into one electronic environment

Highlight

2012: The PHIMT team is currently working with Enterprise CAC Registration Services(ECRS) Team to define implementation criteria. The PHIMT team will modify the application interface using the ECRS to provide users the ability using their CAC to automatically apply for user account access.

.

What Users Are Saying...

“System is always available...”

“...it is very important for all MTFs to be using it”

“Once learned, it was simple”

“...always there when I need it”
